BAXTER'S BLACK WINESAP APPLE TREES

Plant Patent No. 619.

A NEW and distinct variety of Apple Tree, very hardy and vigorous grower with stout branches well spaced, forming a low wide spread with a rather open top, an advantage for high colored apples throughout the tree. Requires less pruning than most varieties—a big saving in cost of picking. Fruit large red to almost crimson black, well spaced, usually setting on an apple every eight to ten inches, which is an advantage to size and color; hangs exceptionally well to the tree late. Unlike most apples this Winesap does not need a Hormone spray. An early regular bearer, orchards now ten to twelve years old bearing ten or more bushels of large red apples each year. Has excellent storage and shipping qualities. Will keep through the winter and late spring and still be crisp, juicy and hold that Winesap flavor; excellent for eating and cooking. An outstanding variety of a large red apple for the future commercial orchard. Trees: 4-ft. up, each \$1.00; lots of 50, 75 cents.
